

# SECURING YOUR PAYMENTS

## Accept online payments and build an online presence to expand your business

### Securing your payments

Advanced card processing facilities to accept online payments on your website or virtual terminal.

BNS Payments can enable your organisation to take one-off and recurring payments and accept credit and debit card payments for Visa, MasterCard and American Express cards, in multiple currencies.

Credit and debit card processing is at the heart of every business. Implementing a good payment processing solution for your online business is essential. As a busy organisation, you do not have time to lose choosing the wrong method to accept credit and debit card payments online, since an unprofessional look is unacceptable for any business. Not all online payment providers are the same. Our solutions offer quick online payment processing in real time and can take as little as 2 seconds to finish running the customer's card and confirming the payment.

### Scalable

Scalability must be a consideration in this modern age. BNS Payments processor can handle large numbers of customer records on your website at the same time. Our servers are in place to handle your largest jobs. This is key if your business is expanding, or even just during a busy period and other peak payment times for your business. The consumer's experience will be the same, no matter when they wish to make a payment.

### Trust

Your business must also look trustworthy online. You can do this more efficiently with a payment process that can integrate seamlessly into your website's design.

You can generate more payments through your site by portraying a more professional image, thereby raising customer confidence and trust when they make online payments with you. Your payment pages must look like a part of your website and their design should be cohesive as this makes you look more reputable.

### Security

Part of looking good as an online business is having the capability to reassure customers of their security while they make payments online. BNS Payments can do this for you on a large scale. Your processing solution will always be backed by the highest levels of security.
